DESIGNATION REPORT OF PRESCOTT LACAC

Building: The Mechanics Block

Location: 118-132 King Street West, Prescott
Town Lot #7, Block #2 on the north side of King Street

Date of Report: 28 June 1985

Prepared by: G. Swoger

A. Reasons for Designation:

The Local Architectural Conservation Advisory Committee recommends the designation of the Mechanics Block for the following reasons:

1. The Mechanics Block was an important contribution to the main business street of Prescott when it was completed in 1874. It could hold its own with the other three-storey brick business premises constructed along King Street in the building boom of the 1870's.

2. The Mechanics Block remains an integral part of the present downtown streetscape. The commercial buildings of the 1870's continue to dominate the main street and to determine its character even today. Their preservation is important.

B. Historical Background:

On 9 May 1874 Thomas Coates, a tinsmith, Samuel Miles Coons, a cabinet maker, and Nesfield Ward, a contractor, purchased from Peter Moran, merchant, Lot #7 on the north side of King Street in Prescott.¹ At the same time Thomas Coates signed an indenture undertaking to construct on the property he had just purchased "a good and substantial stone or brick building with a gable end wall of three stories in height and eight inches in thickness" and promised to allow Peter Moran to share this gable end wall as a "party wall".² The three property owners co-operated in the construction of one large business block on their building sites. The completed building bears a plaque in the centre of the facade stating "Mechanics Block - 1874". Construction must

have been completed just before the end of the year for the Prescott TELEGRAPH reported that the good Templars of Prescott had moved into their hall in the Mechanics Block on December 2nd.³ The tax collectors roll for the east ward of Prescott reveals an increase in the real property assessment for the lot in question of over ten fold between 1874 and 1875, a clear reflection of the value of the substantial business block which the owners had constructed.⁴

C. Architectural Description:

The Mechanics Building is a three-storey building, the facade of which is faced with yellow brick while the sides and back are constructed of red brick. There are four bays across the facade, each containing three windows which have stone sills and arched limestone cornices supported by small consoles. The large wooden cornice across the top of the building is decorated with brackets terminating in acorn-shaped finials. On the street level three of the four original storefronts are still intact.
