In this issue – A renaissance of northern heritage . . . A season of unveilings . . . Routes through the wilderness: The development of a transportation network in northern Ontario
A message from The Honourable Lincoln M. Alexander, Chairman

I was born in downtown Toronto. As a young man, I attended Earl Grey Public School, York University and Osgoode Hall Law School. When I began my career as a lawyer and then entered politics, my travelling was largely confined to southern Ontario. I was embarrassed now by how little I knew about, or appreciated, the northern reaches of this province.

It was a wonderful experience for me — as Ontario’s 26th Lieutenant-Governor — to tour Ontario’s north. Whenever I went, I was warmly welcomed by the mayor, a red carpet and many smiling faces. During these tours, I visited hospitals, schools and town halls, unveiled plaques, toured museums and art galleries, spoke to groups large and small, and enjoyed myself immensely. I developed an instant admiration for these people who took such obvious pride in their accomplishments and those of the generations before them.

So, it is with pleasure that I invite you to explore this issue of Heritage Matters. As Chairman of the Ontario Heritage Trust, I can tell you that our mandate encompasses all parts of this rich, diverse and vast province. In addition to Trust-owned properties throughout the north, we recognize people and their communities in other ways. Through the Provincial Plaque Program, we have erected plaques celebrating the people, places and events that helped form northern Ontario. The Heritage Community Recognition Program also honours individuals and groups from many communities — including Englehart, Johnstown Township, Kapuskasing, Schreiber, Temagami and Callander — for their work in heritage preservation. And, most recently, the Trust’s successful Doors Open Ontario program has taken root in communities across the north — including Red Lake, the Tri-Towns, Thunder Bay, Kenora, Dryden and Sault Ste. Marie.

When I sat down to draft this message, I first read the articles you will find here. They reminded me of the good times I had on my travels through the north— the spectacular natural scenery and landforms, the compelling architecture, the warm and welcoming people. I hope you will enjoy reading these stories as I did.

A renaissance of northern heritage

By Thomas Wicks

Heritage is finding new life in northwestern Ontario. From Thunder Bay to Kenora, the north is experiencing a new appreciation of its heritage resources and using them to enhance communities and celebrate the region’s unique history in the growth of the province.

After railway development connected this once-isolated area to the rest of the province at the end of the 19th century, the abundant natural resources attracted industries, which turned work camps and villages into towns and cities. Over time, the area has taken advantage of its natural beauty and developed its tourism sector as well as retained its traditional resource-based economy. In revitalizing the region’s communities, heritage – both natural and cultural – has begun to play a key role in connecting the area’s past to its present and conveying that history to residents and tourists alike.

Thunder Bay’s Tourist Pagoda, built in 1909, is such an example. Built to the designs of local architect H. Russell Hall, the pagoda was part of a publicity campaign launched by the town of Port Arthur (later renamed Thunder Bay) to promote the city to tourists. At that time, Thunder Bay was a transportation terminal of docks and stations for Canadian National and the Canadian Pacific railways (CNR and CPR), as well as passenger ships. The “publicity Pagoda” located near the railway station was seen as a way of encouraging travelers to visit the growing community. Recalling the eclectic architectural motifs and forms used in English gardens and parks, the mushroom-shaped structure has a distinct green ogee roof. The heritage value of the structure was commemorated by the City of Thunder Bay, who designated it under the Ontario Heritage Act in 1979. In 1986, the building was designated a National Historic Site by the Government of Canada. The Ontario Heritage Trust has held a heritage conservation easement on this property since 1992. Now, almost 100 years since it was built, the pagoda is a part of our heritage that continues to fulfill its original role in providing tourists with information on Thunder Bay and the surrounding area.

The CNR station in the Town of Fort Frances, built in 1913, reflects the importance of the railway in the development of this community. No longer used as a station, the building still holds value to the community as a volunteer bureau and a provincial constabulary office. There is a strong desire on the part of the community to see the property preserved to ensure that it continues to perform an important role in the community.

The Town of Kenora had the foresight to retain their 1898 post office and turn it into municipal offices back in 1980. This task was carried out with the aid of a provincial heritage grant. The building was able to retain its role as a gathering place for the community, thus keeping an important heritage building in use. For 10 years previously, the building had been vacant and was threatened with demolition. The fact that it was saved and put to new use emphasizes the role heritage buildings can play in defining their communities.

The Town of Sioux Lookout – three hours northwest of Thunder Bay – is using its 1911 CNR station as a stepping-off point toward revitalizing its downtown. The importance of this building in the community is so great that its restoration is regarded as a means of transforming the entire town. Sioux Lookout’s economic development officer, Florence Bailey, says that the station was identified in numerous studies as “the anchor of the downtown core.” When originally built, the station sustained the community — providing jobs, transportation, communication and the delivery of goods. VIA Rail still makes regular stops at the station; large crowds of locals gather to greet and welcome passengers as they pass through. The unique history of this station has provided the impetus to reinstate the building as a community hub and economic catalyst; the community has established an economic development commission to oversee the project. The municipality believes that its preservation is vital in providing a focal point for residents in the community. In turn, travelers may be encouraged to stay longer and discover what the area has to offer.

This renaissance of northern heritage continues to shape Ontario in unique and profound ways. These examples highlight the way in which heritage buildings act as stimulators of civic pride and urban redevelopment. Just as these structures reflect their respective communities’ past and early prosperity, they can continue to provide a place for the community to gather, while acting as generators for future revitalization.

Thomas Wicks is an Architectural Advisor – Special Projects with the Ontario Heritage Trust.
The Arctic Watershed follows an erratic course of some 2,240 kilometres (1,400 miles) across northern Ontario. It marks the point where rivers and streams in northern Ontario drain into Hudson’s Bay, and in the other towards the Great Lakes. This unique natural phenomenon has also been a source of contention for centuries because it determined territorial boundaries.

As early as 1670, the area was under dispute. In that year, England’s King Charles II granted the lands to the King’s cousin, Prince Rupert, the HBC’s first governor. The French soon disputed the Company’s claim to this vast territory and nearly drove the English out of the Great Lakes. This unique natural phenomenon has also been a source of contention for centuries because of the determined territorial boundaries.

A royal proclamation set forth the boundaries of the lands acquired from France that year. The continued existence of Rupert’s Land was confirmed, and lands were set aside for use by their aboriginal inhabitants.

In September 1850, the Crown entered into the Robinson Superior Treaty with the Ojibwa of Lake Superior for much of the north shore of Lake Huron and Lake Superior, identifying the Arctic Watershed as the southern boundary of the Hudson’s Bay Company lands.

In 1857, a British parliamentary committee was formed to consider the advisability of renewing the Company’s trade monopoly in the vast western regions and Rupert’s Land. It was critical to establish this fact, given the emerging importance of communication, defence and future settlement in the West.

In August 1869, two provincial plques were unveiled to commemorate the Arctic Watershed – one beside Highway 11 near Kenogami Lake and the other near Raith on Highway 17 in the District of Thunder Bay where the watershed again crosses the roadway. To explore the Trust’s Online Plaque Guide, visit www.heritagetrust.on.ca.

The area around the town held some of the richest deposits of native silver the world has ever seen. In the years following the initial discovery, Cobalt silver transformed the provincial and national economies. This success drove exploration and development of mineral deposits in northern Ontario and across Canada for decades to follow. In nearby Haliburton, a Millennium’s Row sprouted on the shore of Lake Temiskaming where mine owners and managers built opulent mansions with their new-found wealth. But, by the late 1920s, the silver rush had run its course. Silver production slowed in the Tri-Town area (Haileybury, New Liskeard and Cobalt), leading to a decline in prosperity. At this peak, Cobalt had 6,000 inhabitants. Today, the population is approximately 1,200.

Cobalt was quick to recognize its unique heritage. In 1967, the Ontario Heritage Trust erected a provincial plaque to the Cobalt Mining Camp. The lakeside gateway to Cobalt – the former railway station – houses the Cobalt Visitor Centre and the Bunker Museum. It has been designated a heritage property since 1979, and is also protected by a Trust conservation easement. Begun in 1985 – with support from the Ontario Ministry of Northern Development and Mines – a tourister route known as the Silver Trail winds its way in and around the town. This self-guided tour starts at the Northern Ontario Mining Museum, leading visitors past a number of fascinating industrial heritage sites.

In 2002, the Government of Canada designated the Cobalt Mining District as the first National Historic District in Ontario. The district’s heritage value is described by Parks Canada as “a rare cultural landscape possessing a large number of artefacts and buildings directly relating to the evolution of the hard rock mining process of the early 20th century in Canada.” In 2001, as national designation was being considered, TV Ontario declared Cobalt “Ontario’s Most Historic Town.”

Today, the challenges facing Cobalt are many, but so too are its opportunities. In 2007, with support from the Northern Ontario Heritage Fund Corporation and FedNor, the Historic Cobalt Corporation was formed to help manage and organize a community approach to the historic district. The vision of the Corporation is to operate historic Cobalt as a major, world-class heritage destination, successfully attracting guests from around the world and operating on a self-sufficient basis. By combining preservation with renewal, and tourism with prudent community planning, Cobalt is finding new value for its historic mining legacy.

Sean Fraser is the Manager of Conservation Services with the Ontario Heritage Trust.

For more information about the Historic Cobalt Corporation, visit www.historiccobalt.com.
The towering McIntyre Mine Headframe in Timmins, The Clergue Block House and Powder Magazine in Sault Ste. Marie, St. Francis of Assisi Anglican Church in Mindemoya on Manitoulin Island. The former Kenora Land Titles Office. Thanks to the leadership of municipalities and local heritage groups – and with financial assistance from the Trust’s Heritage Challenge Fund – these and other heritage buildings of the north have been preserved for future generations of Ontarians.

The McIntyre Headframe in Timmins was built in 1911 and belongs to one of the oldest mines of the Porcupine gold camp. It was built strictly for utility but over the years accrued symbolic value as an example of industrial heritage and one of the few remaining such structures in Timmins. Its chiselled silhouette on the horizon remains one of the community’s most visible landmarks, marking the entry to the McIntyre gold mine that was once the source of the community’s economic livelihood.

Sault Ste. Marie’s Clergue Block House is a composite log-and-stone structure incorporating the 1819 stone powder magazine of the North West Fur Company, built when Sault Ste. Marie was a small, remote fur trading post. This very early stone structure is now part of the Ermitting/Clergue National Historic Site.

St. Francis of Assisi Anglican Church in Mindemoya on Manitoulin Island was constructed by parishioners in 1932 at the height of the Great Depression. Timbers were cut from local forests, with stone extracted from a nearby quarry. This small stone church in the Norman style is renowned for its collection of religious artifacts and fragments from religious structures in England, including a large stone from Canterbury Cathedral. Assistance from the Heritage Challenge Fund helped with the general repair and restoration of stonework and the provision of barrier-free access for this unique place of worship.

Kenora’s elegant 1917 Edwardian Classical-style Land Titles Office, located beside the District Courthouse of Kenora, has been preserved for future generations of Ontarians. The $5-million Heritage Challenge Fund Community Resources of their past.

Northern icons

By Romas Bubelis

“Opening doors to the north”

By Michael Sawchuck

The 55-million Heritage Challenge Fund Community Program was established in 1999 by the Government of Ontario. It was administered by the Ontario Heritage Trust for community capital restoration projects and endowment funds. Heritage organizations across the province who applied for this funding raised matching dollars. All funds were allocated by April 2001.

Northern Ontario communities continue to play a major role in shaping and defining Doors Open Ontario, adding distinctiveness and adventure to the program. In return, participation in Doors Open provides a direct gateway to the north for tourists wishing to explore this vast and picturesque area of the province. Nearly 20 Doors Open events have been held in northern Ontario since the launch of the program in 2002, including events in each of the “big six” communities of Greater Sudbury, Thunder Bay, Sault Ste. Marie, North Bay, Timmins and Kenora.

In 2008, four northern communities – Greater Sudbury, Kenora, Thunder Bay and Timmins – will open the community’s cultural diversity. Aboriginal and francophone heritage sites will be opened, as well as others that are central to the Finnish, Greek, Jewish and Ukrainian communities. Examples of such sites include: Finlandia Village, St. Nicholas Greek Orthodox Church, Shaar Hashomayim Synagogue and Alberta Gardens.

Doors Open Kenora (September 12-13) will highlight several residences, many of which were built for the community’s most prominent inhabitants. One of these residences is Mather-Walls House, a Queen Anne-style home now owned by the Ontario Heritage Trust and managed by the Lake of the Woods Historical Society.

Doors Open Thunder Bay (September 13) – now in its fifth year – will incorporate several of the community’s most renowned civic and institutional structures. Included in this event will be a library, a high school, a former police station and an 18th-century fountain.

Doors Open Timmins (September 13) provides an opportunity to explore the city’s mining heritage through two of its historic gold mines – the Hållinger and McIntyre Mines. McIntyre Lodge – a retreat for mining executives visiting the area – and McIntyre Arena – built for use by nine employees – will also be open.

Doors Open Ontario is just one of many Trust- led initiatives aimed at growing the collective consciousness of heritage conservation across the province. Other programs – such as the Heritage Community Recognition Program, Young Heritage Leaders, the Provincial Plaque Program and Trails of Ontario – also help strengthen the futures of communities throughout Ontario by investing in the resources of their past.
A season of unveilings

By Joel Swagerman

The Trust’s Provincial Plaque Program provides an enduring visual record of Ontario’s history, helping it come alive through stories of people, places and events that have shaped the province. This summer, a number of plaques will be unveiled – honouring the innovative spirit of the province’s people, the strength of community and Ontario’s cultural diversity. Here are some highlights:

- **The Town of Englehart** is a small community in Ontario’s northeast, born as the result of a railway. The town formed where the Timiskaming and Northern Ontario Railway crossed the White River (now the Englehart River). In 1905, needing someone capable to push the railway farther north, Premier Sir James Whitney asked prominent businessman Jacob Englehart to run the railway company. Englehart, vice-president and founder of Imperial Oil, accepted the offer and became chairman. He also established a railway division point and post office at the White River crossing, which registered the name of Englehart. The division point allowed the town to become a transportation centre for northeastern Ontario and brought manufacturing and maintenance facilities to the town. Englehart celebrates its centennial this year.

- **The Queen’s Bush Black Settlement** is approximately 25 kilometres northwest of present-day Waterloo in the hamlet of Glen Allan. The Queen’s Bush was a large clergy reserve within which a black settlement was formed in the 1830s. The land was not surveyed, roads were non-existent and the settlers made their living through subsistence agriculture. By 1840, the African Methodist Episcopal Church opened and the settlement eventually contained four churches and two schools. In 1842, the government opened the Queen’s Bush for government-sanctioned settlement, but surveys ignored existing homesteads. Many black settlers had difficulty finding the money to buy their land, livestock and farming equipment. Despite this, descendants of the original settlers remained in the area until the 1990s.

- **The small town of Mattawa,** at the confluence of the Mattawa and Ottawa rivers, saw its first permanent settlers in 1837 when the Hudson’s Bay Company established a fur trading post there. As fur trade activity declined, Mattawa became a centre for the forestry industry. A transient population of more than 2,000 lumberjacks was the result of this booming industry. The town experienced a population surge, however, when the Canadian Pacific Railway (CPR) was built through Mattawa and points west. In 1880, more than 4,000 men were working on the railway in the area, nearly half of whom were French-Canadian. Though living and working conditions were difficult, almost half of these workers settled in Mattawa after the completion of the railway through the town. The CPR’s construction contributed greatly to the birth and growth of many towns in the area. More importantly, opportunities presented by the construction of the railway attracted many French-Canadians, who have left an enduring cultural impression on the communities of the region.

- **As the co-founder of what was to become a grocery supermarket empire,** Theodore Pringle Loblaw left an enduring impression on the retail industry in Canada. While still a young boy, Theodore lost both his parents and lived for two years with his grandparents. He moved to Toronto at the age of 17, dreaming of becoming the next Timothy Eaton. In fact, he worked briefly at Eaton’s and then in a downtown grocery store where he met Milton Cork. By 1919, he had opened 19 traditional-style grocery stores in Toronto. In the same year, Loblaw and his new business partner, Milton Cork, established one of the first self-service grocery stores in Canada. The company, of which Loblaw was president, would grow exponentially. After only a decade, there were 95 Loblaw stores in Ontario. Loblaw introduced many innovations in the grocery industry and, as a result, Loblaw Companies is now one of Canada’s largest food distributors and retailers.

Joel Swagerman is a Heritage Programs Assistant with the Ontario Heritage Trust. He is on a co-op placement from the University of Waterloo.

There are nearly 140 provincial plaques throughout northern Ontario – including Grey Owl, Henry Hudson and the Search for the Northwest Passage, The Brent Crater and many other people, places and events. For more information on the Provincial Plaque Program – or to explore the interactive Online Plaque Guide – visit www.heritagetrust.ca.
Ontario Heritage Trust celebrates Heritage Week 2008

By Liane Nowosielecki

Hamilton’s century-old Scottish Rite Club served as an ideal backdrop for the February 15 launch of Heritage Week 2008. This year’s theme – Engaging citizens in community conservation – provided an opportunity to showcase conservation success stories and to demonstrate the resources available to those involved in heritage conservation in communities across Ontario.

The week’s events continued with the presentation of the Lieutenant Governor’s Ontario Heritage Award for Youth Achievement.

2007 Lieutenant Governor’s Ontario Heritage Award for Lifetime Achievement:

- Julia Beek, City of London
- Robert Cardwell, City of Kingston
- Charles Fairbank, Lambton County
- Dr. Grant Head, City of Hamilton
- Marion Helen, Regional Municipality of Niagara
- James Holmes, City of Mississauga
- Alice Hughes, Village of Merrickville-Wolford
- J. Peter Holdsten, Township of Scugog
- Patricia Macik, City of Windsor
- Nena Mardsten, Town of Georgina
- Sally Martin, Municipality of Central Elgin
- Fay McCrackend, Township of Johnson
- Dr. W. John McIntyre, Town of Aurora
- Wilma Morrison, City of Niagara Falls
- Helen Poulis, Township of King
- Alex Rautem, Town of Caledon
- Brian Winter, Town of Whitby

The Lieutenant Governor’s Ontario Heritage Award for Lifetime Achievement recognizes individuals for volunteer contributions to conserving community heritage over a period of 25 years or more. One individual and three groups are recipients of the Lieutenant Governor’s Ontario Heritage Award for Youth Achievement, for exceptional voluntary contributions by young people to heritage conservation.

The Trust thanks Lieutenant Governor David C. Onley for his commitment in honouring the achievements of volunteers involved in heritage preservation activities.

The events of Heritage Week 2008 are a clear testament to ongoing citizen involvement and dedication to community conservation in Ontario.

Liane Nowosielecki is a Marketing and Communications Specialist with the Ontario Heritage Trust. She joined the Trust as an intern with the Ontario Internship Program.
**OUR FRANCOPHONE HERITAGE**

By Karen Bachmann

The French first came to Ontario in 1610, when they chose to explore the Great Lakes basin. Their first permanent settlement occurred in 1701 at Fort Pontchartrain, near Windsor-Detroit. Eastern Ontario development came next and, while many French curéeurs de bois travelled regularly throughout northern Ontario, a permanent francophone community did not come into being until the settlement of the mid-northern areas (North Bay and Sudbury) around 1860. This development happened because of the construction of railway lines and the increased interest in mineral exploration. Once those communities had been organized, it was time to look northward again, and the settlements around Temiskaming opened up the area in the early 1900s. By 1910, anglophone and francophone communities were springing up between Matheson, Cochrane and Hearst, thanks to the Porcupine Gold Rush and the burgeoning lumber industry. It is important to note that today, there are more than 120,000 francophones living and working in northern Ontario and that 22 per cent of Ontarians living in the northeast claim a francophone heritage.

Fortunately for us, there exists a myriad of tangible sites that celebrate the francophone culture in northern Ontario. While there is currently no museum devoted solely to francophone history, we can see this living culture every day in many of our northern communities. This history is notably visible in the local architecture, which includes religious institutions, businesses and local shops, public buildings and industrial sites. Agricultural communities like Val Gagné and Fauquier are practically living history museums in themselves, devoted to both preserving and developing a living francophone culture.

Just such an example of tangible francophone heritage can be found in Timmins. St-Antoine-de-Padoue Cathedral still graces the hill on Pine Street and continues to be an intricate part of our local heritage. As with many institutions in this community, it was the Hollefer Mine – and more importantly, Noah Timms, owner of that mine – that saw the construction of the local hospital and the beginnings of this church. While Father Alexandre Pelletier was responsible for the first small chapel, it would be Father Charles-Eugène Thériault’s responsibility to grow the church and see to a new structure. The cornerstone of the construction of Timmins’ first permanent Catholic church would unfortunately burn to the ground in 1936. By 1937, the cornerstone of the new church had been laid and the church would be completed in 1938. The church is considered one of the finest examples of French Rococo architecture in Ontario.

The new church would be dedicated to Father Charles-Eugène Thériault. As ancona and parapet, it is one of the most beautiful churches in northern Ontario. It is a perfect example of the work that Father Thériault was able to do with his small group of workers. The church is still in use today and is a testament to the work that Father Thériault was able to do with his small group of workers.

**ADVENTUROUS WORKERS WANTED FOR REMOTE LOCATIONS – HOUSING PROVIDED**

By Denis Héroux

The exploration, settlement and development of northern Ontario were motivated by the exploitation of the region’s natural resources – primarily fur, timber and silver. Typically, these industries brought new inhabitants to remote areas and consequently the founding companies had to build houses for their first employees. Moose Factory, Kenesaw and Kirkland Lake all followed this pattern.

The Hudson’s Bay Company (HBC) workers came to Moose Factory from Britain on five-year contracts. They lived in communal quarters in the fort, safe from attacks by their rival, the North West Company. In 1821, the HBC merged with its rival and some of its men had established families with local Cree women. These circumstances prompted the HBC to build company housing for its workforce, a practice that continued well into the 20th century. The Trust owns two of those houses: the Joseph Turner House (c. 1864) and the William McLeod House (1889-90). As with other typical Moose Factory houses, they are built of squared logs covered with horizontal boards, measure 16’ x 20’ (5 m x 6 m.) and are 2½ storeys high. The Trust also owns the HBC Staff House, a two-storey log house built in 1850. Originally housed the unmarried company officers – such as accounting clerks, ships’ captains and the doctor. All of Moose Factory’s residents lived in company-built houses until the 1970s when the company transferred ownership of the houses to the occupants. All have since been demolished except for those saved by the Trust.

Company-built housing was also common in the lumber industry. In 1889, the Kenesaw Lumbering and Manufacturing Company built three comfortable two-storey frame houses for its company managers. The Trust now owns one of them – Mather-Walls House in Kenora – which is operated as a house museum by the Lake of the Woods Historical Society. The company also built 12 semi-detached houses and a boarding house for its workforce.

In 1930, mining magnate Sir Harry Oakes built a 12,000-square-foot (1,100-square-meter) home in Kirkland Lake to accommodate the Lake Shore Company directors and his family when attending company business. The house is really a company-built mansion. It has 12 bedrooms, including four for live-in servants. It also features indoor parking for seven cars, a billiard room and separate men’s and women’s coat rooms with en suite lavatories. Sir Harry Oakes Chateau is owned by the Trust and is operated by the Town of Kirkland Lake as the Museum of Northern History.

All of the Trust’s northern Ontario properties can be visited during the summer except for the McLeod House, which is closed for restoration. The Sir Harry Oakes Chateau is open year-round. For more information about the Trust’s northern properties, visit www.heritagetrust.on.ca.

**PRESERVING THE PAST**

The Sir Harry Oakes Chateau is open year-round. For more information about the Trust’s northern properties, visit www.heritagetrust.on.ca.

**SPOTLIGHT ON HERITAGE**

For more information on the Timmins Museum: NEC, visit www.museumsnorth.org/timmins.
Isolation, great distances, demanding terrain and difficult weather conditions challenged the fortitude and perseverance of the people who forged water routes, roads, railways and air services through northern Ontario’s majestic expanse. Of the nearly 140 provincial plaques in northern Ontario, over 50 commemorate subjects that relate specifically to early northern exploration and the evolution of transportation systems that enabled the development and settlement of this region of the province. Six provincial plaques that pay tribute to these efforts are located along or near Highway 17 – the Trans-Canada Highway. Along this route, from North Bay to Thunder Bay, you can retrace the steps of many who have gone before.

**The Route of the Voyageurs** followed the Ottawa River to its junction with the Mattawa River, went along the Mattawa to Trout Lake, over the arduous La Vase Portage through Lake Nipissing, down the French River and across Georgian Bay and the North Channel to Lakes Michigan and Superior. For two centuries, this route served explorers, missionaries and fur traders intent on opening the interior of North America. The plaque is located at the Tourist Information Centre in North Bay.

By the 1920s, much of the north remained inaccessible except by aircraft. Although *Austin Airways* was not the first airline to operate in northern Ontario, it survived the longest and successfully made the transition from bush flying to passenger service. Initially located in Toronto, the company opened a base on Ramsey Lake in Sudbury in 1935; by 1938, Sudbury became its primary base of operations. The airline hauled freight, trained pilots and transported tourists throughout the north. In the 1940s, *Austin Airways* diversified into other aerial activities. The company was absorbed into Air Ontario in 1987.

**The development of a transportation network in northern Ontario**

**Routes through the wilderness:**

One of the earliest canoe routes through the north closely follows Highway 17. The **Route of the Voyageurs** followed the Ottawa River to its junction with the Mattawa River, went along the Mattawa to Trout Lake, over the arduous La Vase Portage through Lake Nipissing, down the French River and across Georgian Bay and the North Channel to Lakes Michigan and Superior. For two centuries, this route served explorers, missionaries and fur traders intent on opening the interior of North America. The plaque is located at the Tourist Information Centre in North Bay.

The **Japanese-Canadian Road Camps 1942-1944** tells the story of the road, which was constructed in 1873-74 primarily to provide for the delivery of mail between Duluth and Thunder Bay during the winter months when navigation was closed on Lake Superior. The road was used by mail carriers until the completion of the Canadian Pacific Railway in 1882. With the arrival of the automobile, a new road to the American border was required. Highway 61 – or Scott Highway – was completed in 1917 and became one of the region’s popular scenic routes.

These accounts are just a few of the countless stories of courage and innovation that comprise the incredible heritage of northern Ontario – a wonderful legacy left by the people who travelled, worked and lived in this vast and challenging region of Ontario during its early years of development. Look for these plaques when you journey through the north and discover for yourself the beauty of the landscapes that greeted these tenacious people.

Beth Anne Mendes is the Plaque Program Coordinator with the Ontario Heritage Trust.
The community of Red Lake invites you to its first Woodland Arts Festival: A Tribute to Norval Morrisseau and the Woodland Artists, July 4-6, 2008.

The Festival will take you on a special journey as you discover the untold story of the artist’s life — from 1959 when he arrived here to work as a gold miner, to when he left the area around 1973, an artist of international calibre.

Through special exhibitions, story-telling, guided walking tours, plays, dance performances and art workshops, the Festival will tell the story of the birth and evolution of the Woodland Art movement in the Red Lake community. Also planned is an art fair, art exhibition, audio-visual presentations and panel discussions.

For more information, visit http://redlakemuseum.com.

The Canadian Bushplane Heritage Centre: Bushplane Days 2008

The Canadian Bushplane Heritage Centre in Sault Ste. Marie is dedicated to preserving the history of bush flying and forest protection in Canada.

Bushplane Days 2008 — named one of the Top 100 Festivals in Ontario — will be held on Saturday, September 20 and Sunday, September 21, 2008 from 9 a.m. to 6 p.m. at the Canadian Bushplane Heritage Centre waterfront hangar in downtown Sault Ste. Marie.

Activities include chartered flights and more. The main attraction of this festival is a CL-415 (waterbombing aircraft) aerial demonstration by the Ministry of Natural Resources.

For more information, visit www.bushplane.com.

Heritage is often associated with the distant past and, for many, a dusty museum. Northern Ontario, however, is proposing a rejuvenation of its heritage by pairing it with industrialization and the great outdoors: northern Ontario heritage is not limited to the colonization that occurred at the end of the 19th century and start of the 20th century.

Some treasures remain well hidden, lost in the vastness of Ontario’s north. For example, the petroglyphs of the Missinaibi Lake, Agawa Rock and Eagle-Dogtooth Provincial Park east of Kenora are witness to thousands of years of presence of the people who shaped our culture. Many of us remember that this vast territory — which accounts for 89 per cent of our province — was populated by more than the European pioneers that settled along the developing transcontinental railway. A quick look at a map is proof. While many Aboriginal communities are no longer here, the names of the rivers have kept their memories alive — Abitibi, Missinaibi, Attawapiskat and Wiikin.

French explorers also left their mark. As early as 1611, Étienne Brûlé became the first European to admire the freshwater seas, while crossing the Mattawa River, from north to south – from Sudbury to Manitoulin and Sault St. Marie to Hearst – journey through landscapes that not only attest to a heritage of industrialization in the form of pulp and paper mills and mines, but also inspired the Group of Seven. Still, along the routes where agriculture and forestry meet we see abandoned farms, treasures that are left vacant by a lack of regard to our heritage.

In short, northern Ontario’s heritage is the image of its land: rugged and diverse. Nevertheless, the heritage is still alive and waiting to fill you with wonder. There is still much to discover on our northern frontier.

For more information about Direction Ontario, visit www.directionontario.ca. Discover a variety of adventures and tours offered by Direction Ontario, such as the Circuit Champlain and the Circuits des fourrures, or more recent one – that of industrialization. A new look at the fur trade journey through landscapes that not only attest to a heritage of industrialization in the form of pulp and paper mills and mines, but also inspired the Group of Seven. Nevertheless, the heritage is still alive and waiting to fill you with wonder. There is still much to discover on our northern frontier.

NORTHERN ONTARIO: AN AUTHENTIC HERITAGE

Barnum House
a National Historic Site

When Eliakim Barnum emigrated from the United States in 1807, he settled in Grafton, east of Cobourg. By 1819, Barnum owned over 900 acres (364 hectares) of land, a thriving milling business, a tavern and distillery. He had a stylish house built that stands today as one of Ontario’s finest examples of neoclassical architecture.

Visit Barnum House this summer and experience the grandeur of this historic site with guided tours through period rooms. Open from early June to Labour Day. For more information, call 416-325-5000.

Barnum House, Highway 2, Grafton

Enoch Turner Schoolhouse

Visit the oldest school still standing in Toronto and experience what education was like in the Victorian era. Established in 1848 by Enoch Turner, a wealthy brewer, this was the first free school in the city. Today, this remarkable schoolhouse is a venue for educational programs, meetings, weddings and receptions.

Open year-round for tours and school visits, and a unique venue for special events. For more information, call 416-863-0010.

Enoch Turner Schoolhouse
106 Trinity Street, Toronto

Uncle Tom’s Cabin Historic Site

Visit this fascinating site and learn more about Ontario’s black heritage. The museum – built on the site of the black settlement that fugitive slave and abolitionist Rev. Josiah Henson helped found in 1841 – preserves the settlement where Henson lived.

This five-acre site includes an interpretive centre, three historic buildings (including Henson’s house), two cemeteries, extensive artifacts and a gift shop.

Open from May 17 to October 31. Special Emancipation Day celebrations Saturday, August 2. Join us in 2008 as we mark the 125th anniversary of Josiah Henson’s death (1883-2008).

For more information, call 519-683-2978 or visit www.uncletomscabin.org.

Uncle Tom’s Cabin Historic Site
29251 Uncle Tom’s Road, Dresden

Visit Fulford Place and the Homewood Museum

Tours of these National Historic Sites are available throughout the summer.

Fulford Place: This 20,000-square-foot, 35-room mansion showcases period rooms and special exhibits. Enjoy this rare glimpse of a gracious lifestyle from another era.

Be sure to visit the gift shop.

Fulford Place, 287 King Street East, Brockville

Homewood Museum: Take an informative guided tour of one of Ontario’s oldest houses and explore period rooms with original furnishings – from textiles and photographs to porcelain and furniture.

Homewood Museum, Highway 2 between Maitland and Prescott

For more information on touring both sites, call 613-498-3003 or e-mail fulford@heritagetrust.on.ca.
